

OIL-X IP50

50 bar Compressed Air Filters

Grade WS Water Separators
Grade AO General Purpose & Grade AA High Efficiency
Coalescing & Dry Particulate Filters
Grade ACS Oil Vapour Reduction Filters (1/4" ~ 2")

Intermediate Pressure Compressed Air Filters

Compressed air contains 10 contaminants (emanating from 4 sources) which must be treated and reduced to acceptable levels for the compressed air system to operate safely, efficiently and cost effectively.

Most industrial compressed air applications operate at pressures around 7, 10 or 13 bar g and purification equipment is typically designed around these operating pressures. There are however, applications that require higher operating pressures (which also leads to increased concentration of many contaminants).

Parker domnick hunter OIL-X IP50 Intermediate Pressure Filters

Since the introduction of the first OIL-X range, Parker domnick hunter has continued to develop both the compressed air filter and the standards governing compressed air quality.

Constantly innovated, OIL-X has become the leading technology for compressed air filtration, providing the exact balance between air quality, energy efficiency and low lifetime costs.

The Parker domnick hunter OIL-X IP50 Intermediate Pressure filter range is available in multiple filtration grades to cover all filtration requirements, including water separators, general purpose and high efficiency coalescing grades, general purpose and high efficiency dry particulate grades and an oil vapour reduction grade.

Advantages

- Meets or exceeds the requirements for delivered air quality shown in all editions of ISO8573-1, the international standard for compressed air quality
- Pleated filter element – Coalescing & Dry Particulate filter media is constructed to reduce air flow velocity and pressure loss whilst providing increased dirt holding capacity, and improved filtration efficiency
- Parker OIL-X coalescing and dry particulate filters are fully tested – Grades AO & AA in accordance with ISO12500-1 / ISO8573-2 for oil aerosol and ISO8573-4 for particulate & Grade ACS in accordance with ISO8573-5 for oil vapour
- Ideally suited for Food / Beverage / Pharmaceutical / P.E.T. applications
 - FDA Title 21 compliance
 - EC1935/2004 Exempt
- Air Quality Guarantee - The only filter range to offer a one year air quality guarantee
- Housing Guarantee - 10 year guarantee on filter housings

Filtration Performance

Filtration Grade	Filter Type	Particle Reduction (inc water & oil aerosols)	Max Remaining Oil Content at 21°C (70°F)	Filtration Efficiency	Initial Dry Differential Pressure	Initial Saturated Differential Pressure	Change Element Every	Precede with Filtration Grade
WS	Liquid Oil & Water	N/A	N/A	>90%	N/A	<70 mbar (<1 psi)	N/A	N/A
AO	Coalescing & Dry Particulate	Down to 1 micron	0.5 mg/m ³ 0.5 ppm(w)	99.925%	<70 mbar (<1 psi)	<140 mbar (<2 psi)	12 months	WS
AA	Coalescing & Dry Particulate	Down to 0.01 micron	0.01 mg/m ³ 0.01 ppm(w)	99.9999%	<140 mbar (<1.5 psi)	<200 mbar (<3 psi)	12 months	AO
ACS	Oil Vapour Reduction	N/A	0.003 mg/m ³ 0.003 ppm(w)	N/A	<140 mbar (<1.5 psi)	N/A	When oil vapour is detected	A0+AA

Important Note:

Using the same filter housings as their coalescing and dry particulate counterparts in the OIL-X IP50 range, Grade ACS filter elements differ in that they utilise a deep wrapped bed of carbon cloth to adsorb oil vapour. It is important to note, in-line adsorption filter elements have a different life span compared to coalescing and dry particulate filters and require more frequent element changes.

Stated flows are for operation at 7 bar (g) (102 psi g) with reference to 20°C, 1 bar (a), 0% relative water vapour pressure. For flows at other pressures, apply the correction factors shown below.

Product Selection & Correction Factors

To correctly select a filter model, the flow rate of the filter must be adjusted for the minimum operating (inlet) pressure at the point of installation.

1. Obtain the minimum operating (inlet) pressure and maximum compressed air flow rate at the inlet of the filter.
2. Select the correction factor for minimum inlet pressure from the CFMIP table (always round down e.g. for 33 bar, use 30 bar correction factor)
3. Calculate the minimum filtration capacity. Minimum Filtration Capacity = Compressed Air Flow Rate x CFMIP
4. Using the minimum filtration capacity, select a filter model from the flow rate tables above (filter selected must have a flow rate equal to or greater than the minimum filtration capacity).

CFMIP - Correction Factor Minimum Inlet Pressure
